NEW YORK
BOTANICAL
GARDEN.

albany Oct 31st
1837

My dear sir/

I am arrived thus far on my return to New York after visiting both the Canadas, and shall read my account on Thursday next. Packet this evening, mean to proceed to the same quarter on which sets tomorrow evening

I have directed him to call when he is to enquire whether you have received any letters addressed to me, and likewise to take back the letter which you took charge from Wentworth. My plan is to proceed at once from New York to New England, visiting Boston & Newhaven before the week sets in — I should be glad however to see one of the scientific men attached to your Expedition on at New York

how they can. You probably will know
when that is okay to take them, &
if you should return or they are
likely to be detained until a week
I should keep them a day or two
at home, but keep I shut it. How
England, or on the off chance in with
them. I should feel assured by any
expenses we can pin on the
culprit - if not prevented I thing
ourselves allowed to. I should
proceed to Newhaven on Thursday
morning
I should try to hit on at Newhaven
may return and remain
a month

My dear Sir — I am glad to see
your signature, as reminding me of
old times, and to please
days past — in your employ
some twenty years ago —

In answer to your inquiry
respecting the superphosphate
manufactured by
Chemist, Sugar works, Plaquemine
the firm which he represents
are Patentees of the Invention,
and keep the work of preparing

the superphosphate, I believe,
a secret. All I know of the
method is derived from
a visit I had the time
last year to the Factory,
and I am therefore inclined
to give a short account of
it at the risk of the
British Association held
at Dublin, having assu-
med, that the superphosphate
as prepared by the Patentee
answers very well on -
must not be thrown
the farmer must from

a Copy of your Government
Explanations in the duration
of the Passport" and be a
most valuable acquisition to
me, and if you Government
is so liberal as to send
the book as a present to
Professor Sowerby, the
Botanic Garden at Liverpool
might perhaps put in a
claim, although I might
not presume to keep it by
myself — for I have a very good Botanical
Library to which I have allowed
access to Members of the Liverpool
Societies, so far as I conveniently can.

and it has been augmented lately by the same Lady, who consigned to us her Husbands extensive Herbarium, well known in England at last, as the Sheldrake Collection — so he an thus well supplied with plants from that part of America which had been explored at the time the Collection was made, but stood in great[illegible] of every fresh plants more recently examined. ——

Thus I had the pleasure of seeing you in New York I recollect speaking to you as to a double name my pellegrina, holding the two Chairs of Chemistry and Botany. I know not whether the same applies to you at the present moment, but I have written the last
